1. The examiner acknowledges receipt of the properly executed 37 C.F.R. 1.132 Affidavit on March 23, 2004, which supercedes the scanned unexecuted copy, filed March 1, 2004. The examiner will have the executed 1.132 Affidavit scanned and placed in the record.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. Sipos on March 30, 2004.

The application has been amended as follows:

In the Claims:

Claim 1, line 3, before "cross-linked" insert --non-cereal starch--

Delete claim 2.

Claim 5, line 1, before "cross-linked" insert --non-cereal--

Delete claim 6.

Claim 12, line 1 after "foodstuff" insert --according to claim 11--

3. Examiner's Comment:

In the 37 C.F.R. 1.132 Affidavit submitted on March 23, 2004, applicant has properly compared the method and cross-linked starch as claimed in the instant invention with that of the Jeffcoat EP 0 796 868 starches. Applicant has persuasively shown that the instant non-cereal cross-linked starch and process of using the non-cereal cross-linked starch in foodstuff shown in the microscopic

photographs of Figure 2 and Figure 4. The photomicrographs show that there is a marked difference in granule size and that the starch of the instant invention wherein the figures show discrete starch particles when the foodstuff containing the starch is subject to heat and/or shear whereas there is no showing in the Jeffcoat starch and foodstuff containing the starch does not disintegrate into discrete particles. Therefore, the product and process as claimed is new, different and unobvious over the prior art wherein the prior art fails to teach and/or suggest a process and composition comprising a cross-linked starch and foodstuff wherein the starch disintegrates into discrete starch particles when the foodstuff is subjected to conditions of heat and/or shear. The foodstuff containing the starch as claimed exhibits the properties of being short, smooth and shiny after heat and/or shear, which has not been taught either singularly or in combination by the prior art.
